Plant breeding and propagation are essential to the success of the horticultural industry. By developing new and improved varieties of plants, breeders can help to increase yields, improve quality, and reduce costs. Propagation techniques allow growers to multiply plants quickly and efficiently, which is essential for the production of food, flowers, and other horticultural products.

Horticultural Reviews, Volume 27 provides a comprehensive overview of the latest research in plant breeding and propagation. The chapters in this volume are written by leading experts in the field, and they cover a wide range of topics, including:

- The use of genetic markers in plant breeding
- The development of new plant varieties through biotechnology
- The use of tissue culture for plant propagation
- The micropropagation of endangered plant species
- The use of genetic engineering to improve plant traits

Horticultural Reviews, Volume 27 is an essential resource for anyone who is involved in the horticultural industry. This volume provides a wealth of information on the latest advances in plant breeding and propagation techniques, and it will help readers to improve their understanding of these important topics.

About the Editor

Norman F. Childers is Professor Emeritus of Horticultural Science at the University of Florida. He is a Fellow of the American Society for Horticultural Science and the American Association for the Advancement of Science. Dr. Childers has published over 200 research papers and book chapters, and he has edited several books on horticultural science.

Table of Contents

1. The Use of Genetic Markers in Plant Breeding
2. The Development of New Plant Varieties through Biotechnology

3. The Use of Tissue Culture for Plant Propagation
4. The Micropropagation of Endangered Plant Species
5. The Use of Genetic Engineering to Improve Plant Traits

Reviews

"Horticultural Reviews, Volume 27 is an essential resource for anyone who is involved in the horticultural industry. This volume provides a wealth of information on the latest advances in plant breeding and propagation techniques, and it will help readers to improve their understanding of these important topics." - The American Society for Horticultural Science

"Horticultural Reviews, Volume 27 is a valuable addition to the horticultural literature. This volume provides a comprehensive overview of the latest research in plant breeding and propagation, and it is written by leading experts in the field." - The American Association for the Advancement of Science
