How can we develop transformative tools for thought?

Andy Matuschak and Michael Nielsen October 2019

Virt of the at (in) each of modern computing is the way of a golden rule: the additional eyes. In this story, primary powers present a dream by which computers enabled powerful tools for thought, that is, tools to augment human intelligence. One of those pioneers, Alan Kay, summed up the objectives of this dream when he wrote of the potential of the personal computer: "The very one who would actually change the thought patterns of an entire civilization."

It was exciting dreams which helped to inspire the interactive graphics, windowing systems, and much else. This responsibility could also be disappointed, to find that computers have not yet been nearly as transformative as they were once for thought, as for language and writing. Today, it's common to fantasize about AI solving the seemingly insurmountable problems of the past. But what if we could have a little, determined effort to explore the value of manufacturing new tools for thought.

We believe now is a good time to work hard on this point again. In this essay, we describe a set of ideas we believe can be used to help develop tools for thought. In the first part of the essay we describe an experimental journey system that we've built, a kind of personal medium intended to support long-term agency. This is a description of an intuitive method detailing how we've iteratively improved it. We actually
